A;Title: Human tumor necrosis factor. Production, purification, and characterization.
A;Contents: annocation; disulfide bond
A;Contents: Secreted from mitogen-activated macrophages within 4-24 hours after induction out detriment to normal cells: It can also act synergistically with interferon gamma to C;Comment: TNF-alpha and -bera (lymphotoxin) are the products of different genes closely ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Superfamily: tumor necrosis factor

A;Riciatio: Natural human tumor necrosis factor beta (lymphotoxin). Variable O-glycosylatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A; Contents: annotation
C; Comment: Secreted from mitogen-activated lymphocytes within 1-2 days after induction,
while having no detrimental effect on normal cells. It can also act synergistically wit
C; Comment: This protein and TNF-alpha (tumor necrosis factor) are the products of differ
ical activities but are produced by different cell types and have different induction ki
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Aritie: Cloning and expression in Escherichia coli of the gene for mouse tumor necrosis A; Reference number: A22908; MUD:88224564; PMID:2836146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that induces apoptosis.";
Immunity 3:673-682(1995).
-!- FONCTION: Cytokine that binds to TNFRSF10A/TRAILRI,
TNFRSF10B/TRAILR2, TNFRSF10C/TRAILR3, TNFRSF10D/TRAILR4 and
possibly also to TNFRSF11B/OPG. Induces apoptosis. Its activity
may be modulated by binding to the decoy receptors
TNFRSF10C/TRAILR3, TNFRSF10D/TRAILR4 and TNFRSF11B/OPG that cannot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Identification and characterization of a new member of the TNF family

-1- SUBCELLULAR LOCATION: Type II membrane protein (Potential)
-1- TISSUE SPECIFICITY: Widespread.
-1- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 287;

                                                                                                                                                                                                                                                   TNFREFILATORY. Osteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         member 11, membrane form.
Tumor necrosis factor ligand superfamily
member 11, soluble form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumor necrosis factor ligand superfamily

    similarity).
    TISSUE SPECIFICITY: Highly expressed in thymus and bone tissues.
    PTM: The soluble form derives from the membrane form by proteolytic proceesing (By similarity).
    SIMILARITY: Belongs to the tumor necrosis factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBUNIT: Homotrimer (By similarity). A high level expression is also seen in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the trabecular bone and lung.

PTM: N-glycosylated.

PTM: The soluble form of isoform 1 derives from the membrane form by proteolytic processing. The cleavage may be catalyzed by ADAM17. A further shorter soluble form was observed.

DISEASE: Deficiency in Thfsfll results in failure to form lobulo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=99214075; PubMed=10196481; DOI=10.1016/S0378-1119(99)00025-6;

alveolar mammary structures during pregnancy, resulting in death of newborns. Trance-deficient mice show severe osteopetrosis, with no osteoclasts, marrow spaces, or tooth eruption, and exhibit profound growth retardation at several skeletal sites, including the limbs, skull, and vertebrae and have marked chondrodysplasia, with thick, irregular growth plates and a relative increase in hypertrophic chondrocytes. SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /FTId=VSP_006448.

                                                                                                                                                                                     Isold-014788-3; Sequence=VSP_006446; Isold-014788-3; Sequence=VSP_006446; TISSUE SPECIFICITY: Highest in the peripheral lymph nodes, weak in spleen, peripheral blood Leukocytes, bone marrow, heart, placenta, stemach and thyroid.
INDUCTION: Up-regulated by T cell receptor stimulation. PTM: The soluble form of isoform 1 derives from the membrane form by proteolytic processing (By similarity). The cleavage may be catalyzed by ADAMIT.
SIMILARITY: Belongs to the tumor necrosis factor family.

Proc. Natl. Acad. Sci. U.S.A. 94:3914-3919(1997).

1- FUNCTION: Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development.

TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DCR3 modulates its effects (By similarity).

TL2; TRAIL; tumour necrosis related receptor; TR5; inflammation; arthritis; septicaemia; transplant rejection; autoimmune disease; inflammatory bowel disease; graft versus host disease; infection; stroke; ischaemia; acute respiratory disease syndrome; psoriasis; restenosis; brain injury; AIDS; bone disease; cancer; atherosclerosis; Alzheimer's disease; human; therapy; diagnosis; ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of human TL2 (also known as TRAIL), which has newly been discovered to be a ligand of human tumour necrosis related receptor TR5 (see AAW7631). This TR5 polypeptide of the invention and TL2 can be used in screening processes for compounds which bind the receptor, or its ligand, and which activate (agonists) or inhibit (ancagonists) the receptor or TL2. Treatment of a subject with the need to inhibit TR5 polypeptide activity comprises administering an antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide encoding TRS polypeptide - used to diagnose, prevent and treat e.g. inflammation, arthritis, septicaemia, autoimmune diseases, infections, stroke, ischaemia, ARDS, psoriasis, restenosis, brain injury, AIDS and bone diseases.
                                                                                                                                                                                                            ALIGNMENTS

            expression of the nuclectide sequence encoding the polypeptide and/or administering a polypeptide that competes with the polypeptide for its ligand, substrate or receptor. The active agents can be used for the treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), transplant rejection, graft vs host disease, infection, stroke, ischaemia, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, cancer (e.g. lymphoproliferative disorders), atherosclerosis and Alzheimer's disease

Identifying agonists and antagonists to tumour necrosis factor receptor

```
The invention relates to identifying agonists or antagonists to tumour necrosis factor receptor (TNF-R) related polypeptides (TR1 and TR2, TL2 and TL4). The method compirates: (a) (i) contacting TR1 or TR2 with a candidate compound in the presence of TL2 or TL4; or (ii) contacting TL2 or TL4 with a candidate compound in the presence of TR1 or TR2; and (b) assessing the ability of the candidate compound to compete with TR1 or TR2 binding to TL2 or TL4. TR and TL agonists and antagonists are useful for treating diseases caused by imbalance of TL or TR polypeptide levels, which cause: chronic and acute inflammation, arthritis, septicemia, autoimmune diseases, transplant rejection, graft vs. host disease, inflection, stroke, ischemia, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, cancer, athersclerosis and Alzabiner's disease. The present sequence represents a TNF-R related
